

JB453 - Red Hat JBoss Data Grid Development

- Red Hat JBoss Data Grid overview
 - Learn about the features and architecture of Red Hat JBoss Data Grid.
- Install Red Hat JBoss Data Grid
 - Install Red Hat JBoss Data Grid and configure the development environment.
- Develop a cache-based application
 - Code, compile, and test an application that uses the Red Hat JBoss Data Grid cache.
- Access a remote cache
 - Access a cache with remote cache managers using a variety of connector types.
- Configure eviction and expiration of cache entries
 - Evict and expire cache entries.
- Maintain cache integrity
 - Maintain cache integrity with transactions and locking.
- Clustering caches
 - Configure, manage, and optimize clustered caches.
- Persist the cache
 - Back up the memory cache with a persistent cache store.
- Secure the cache
 - Restrict access to cache managers and caches.
- Search the cache
 - Query the cache elements using the Infinispan query features.
- Course review
 - Continue practicing developing applications with caching using the material presented in this course.
