
Underwater data centers: The revolution next.

Data Center in water, this sound to be quite ridiculous as no healthy combination could be physically worked out between water and electronics. But Microsoft the Legacy technology giant is working on a cutting edge technology to pair up a cost effective combination of hosting data center under water. An appraisal on the overall data center cost, it is estimated that the power consumption for distribution and cooling of the system seems to be unreasonably high and it is valued to cover about 35% of the total cost of the system. In a simple analogic projection it could be interpreted as that a large data center with industrial scale operation require electricity as much as that required for a small township.

RHEL the Best Enterprise Distros of 2016

Proprietary software was a populist obsession among the tech lovers and tech-freaks till the advent of 21st century. Since the inception of the open source movement Linux has triggered a drastic revolution in the enterprise level as well as in the consumer space. Now the Linux Distros have turned out to be feverish lure to most of the enterprise level users and desktop environment.....
